We believe that there is an SSH Password inside password protected 'ZIP' folder. Can you crack the 'ZIP' folder and get the SSH password?

Once extracted you will see a zip file

Let's try to crack it with fcrackzip

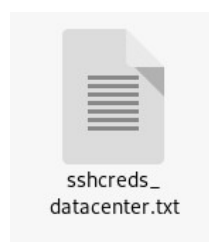

```
root@kali:~/Documents# fcrackzip -D -u -p /usr/share/wordlists/rockyou.txt fsociety.zip
```

PASSWORD FOUND!!!!: pw == justdoit

You got a password : justdoit

Uncompress fsociety.zip with justdoit for password.

You will get a txt file

Open it and you will see a base64
