

Stego : Hackerman

Once extracted you got a picture.

Using strings on it you will get a md5 « strings hackerman.jpg »

```
03n=  
2<co;  
5634275d694f8665957746c9619132f0
```

Decode the md5 here : <https://www.md5online.org/md5-decrypt.html>

5634275d694f8665957746c9619132f0

Decrypted the hash said : almost

Found : **almost**
(hash = 5634275d694f8665957746c9619132f0)

Using steghide with « almost » as password you will see something into the picture

```
nge/stego/Hackerman# steghide info hackerman.jpg  
"hackerman.jpg":  
  format: jpeg  
  capacity: 5.8 KB  
  Essayer d'obtenir des informations  propos des données incorporées ? (o/n) o  
  Entrez la passphrase:  
  fichier  inclure "hackerman.txt":  
    taille: 21.0 Byte  
    cryptage: rijndael-128, cbc  
    compression: oui
```

You discover there is « hackerman.txt » hidden into the hackerman.jpg.

Use steghide for extract the text file.

```
root@kali:~# steghide extract -sf hackerman.jpg
Entrez la passphrase:
Écriture des données extraites dans "hackerman.txt".
```

Open the hackerman.txt and you will found a base64 on it.

```
SFRCEzN2MWxfYzByCH0=
```

Decode the base64

```
SFRCEzN2MWxfYzByCH0=
```

```
root@kali:~# echo 'SFRCEzN2MWxfYzByCH0=' | base64 -d
HTB{3v1l_c0rp}root@kali:~#
```

And you got the flag : HTB{3v1l_c0rp}
