

# NeverLAN CTF

## Recon : Thats just Phreaky

Value : 200 pts

Difficulty : Hard

Description : The first of many stories that have been told. 01 September 2017 | 14:01

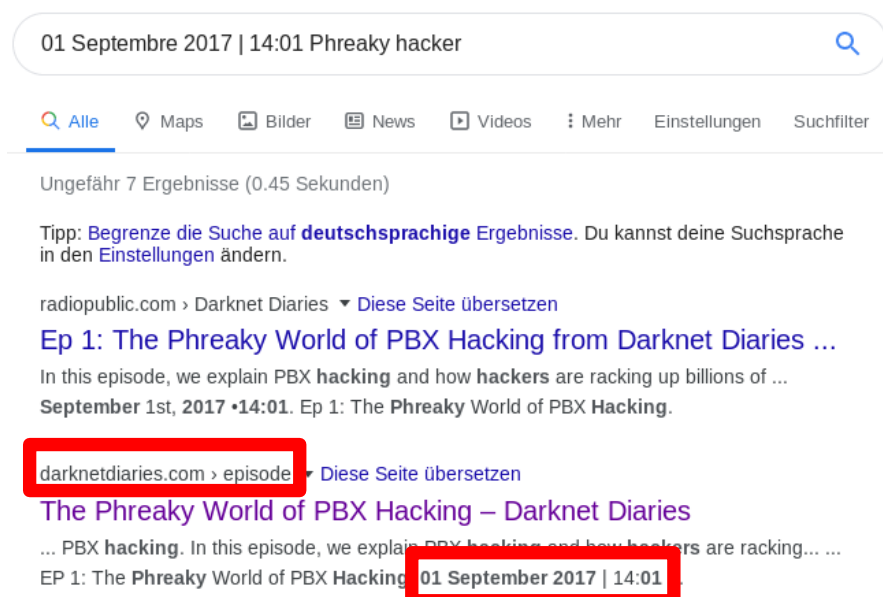

Your flag will be in the normal `flag{flagGoesHere}` syntax.

Attachment : None

## Solution :

On google i searched first with this query : «01 September 2017 | 14:01», but i dont get any potential result related to our challenge.

So i read again the challenge tittle and added the word «phreaky hacker» to my search. And i get two potential result.

But only one have the date with our format. And only one seem to be the original website of the post «DarknetDiaries».

Opening the blog, and we see its a story about PBX Hacking. But no flag.

Source : <https://darknetdiaries.com/episode/1/>

Looking for the source code, and we found the flag at the end of the page at line 389.

```
389      <!-- flag{n3v3rl4nctf_s4ys_t3ll_us_4n0th3r_1_jack} -->
390 </body>
391 </html>
```

---

**Flag : flag{n3v3rl4nctf\_s4ys\_t3ll\_us\_4n0th3r\_1\_jack}**
